Re: The Electronic Availability of the Official Gazette of the U.S. Patent and Trademark Office

Paper as a medium limits the Gazette's usefulness. The paper publication can only be read by one person at a time. It is expensive to produce, print and mail and cumbersome to handle and store. Paper is also a static medium. Paper cannot be quickly, efficiently or thoroughly searched for specific information.

The content of the Official Gazette is extremely valuable and the coverage is comprehensive. The notices, expired patents, re-examinations and reissued patents are conveniently located in the front of the Gazette. Some of this information can only be found by searching several different places on the U.S. Patent Office's website.

The chemists in our company consider the classification of patents by subject; General and Mechanical, Chemical and Electrical and the availability of drawings, diagrams, schematics and chemical formulas to be the most important features of the Official Gazette.

There is no existing government or commercial database which classifies the patents in the same way or provides the graphical illustrations.

Adobe Acrobat has revolutionized the entire process of creating and distributing information. Superior quality documents with a variety of fonts and graphics can be quickly and easily produced from the original electronic version of any publication using Adobe Acrobat software.

An Adobe Acrobat version of the Gazette will eliminate the expensive processes of production, printing and mailing. The Adobe Acrobat patent images combined with a powerful database or search engine, will provide tremendously enhanced indepth searching capabilities.

The electronic version of Official Gazette will be available to an unlimited number of users simultaneously, thus fulfilling your agency's mission to make this valuable information available to the widest possible audience.
